

CRYPTO LOAN BOOST

Leveraged Crypto Asset Pools

✦ Bitcoin & Ethereum

✦ Up to 60x Leverage

✦ BSC Smart Contracts

✦ 5-Level Referrals

Powered by Binance Smart Chain · MetaMask & Trust Wallet Compatible · Chainlink Oracles

May 2026 | Live Market Data

⚠ Crypto investments carry significant risk. Please invest responsibly.

BTC \$76,130

ETH \$2,268

Executive Summary

A next-generation leveraged lending platform built for the crypto bull cycle

What is Crypto Loan Boost?

A community-powered lending pool where participants contribute a Pool Fee and receive a leveraged crypto loan — invested into Bitcoin or Ethereum — with structured liquidation targets to realize profits.

\$100

Min. Pool Entry

How is it Secured?

All operations run on audited BSC smart contracts with Chainlink price oracles, multi-signature admin keys, and an emergency pause mechanism. No human can move funds outside the protocol rules.

BSC

Blockchain

Why Now?

Bitcoin is at ~\$76K with a proven ATH of \$126K (Oct 2025). Ethereum trades at ~\$2,268 with May historically its strongest month (+34.7% avg). Entry at current levels creates compelling upside to target prices.

\$500	30x	\$15,000	0.19700 BTC	6.614 ETH	BTC: \$150K→\$200K / ETH: \$15K→\$20K
\$600	35x	\$21,000	0.27580 BTC	9.260 ETH	BTC: \$150K→\$200K / ETH: \$15K→\$20K
\$700	40x	\$28,000	0.36775 BTC	12.346 ETH	BTC: \$150K→\$200K / ETH: \$15K→\$20K
\$800	45x	\$36,000	0.47275 BTC	15.873 ETH	BTC: \$150K→\$200K / ETH: \$15K→\$20K
\$900	50x	\$45,000	0.59119 BTC	19.841 ETH	BTC: \$150K→\$200K / ETH: \$15K→\$20K
\$1,000	60x	\$60,000	0.78818 BTC	26.455 ETH	BTC: \$150K→\$200K / ETH: \$15K→\$20K

⚠ Prices update in real-time via Chainlink Oracle. BTC/ETH allocation reflects amount at time of pool purchase.

Bitcoin (BTC) Investment Strategy

From today's \$76,130 to a projected \$200,000 — a strategic 2-phase liquidation plan

Phase 1

Soft Target

\$150,000

▲ 96.5% upside from entry

Partial Liquidation 30–50%

When BTC reaches \$150,000 the smart contract triggers an automatic partial sell of 30–50% of holdings. Profits are distributed: 85% to the participant's wallet and 15% platform fee. Remaining BTC continues to appreciate.

Phase 2

Main Target

\$200,000

▲ 162.7% upside from entry

Full Liquidation

At \$200,000 per BTC, the contract executes a full position liquidation. All proceeds are calculated, platform fee is deducted, and the participant receives their full profit plus original loan principal repayment back to the pool.

Ethereum (ETH) Investment Strategy

From today's \$2,268 to a projected \$20,000 — 6.6x to 8.8x return potential

Phase 1

Initial Target

\$15,000

▲ 561% upside from entry

Partial Liquidation 30–50%

At \$15,000 per ETH, the contract triggers a 30–50% partial liquidation. Standard Charter projects ETH could reach \$10,000–\$40,000 long-term. Partial sell locks in substantial gains while keeping upside exposure.

Phase 2

Final Target

\$20,000

▲ 782% upside from entry

Full Liquidation

Full liquidation at \$20,000. Given Ethereum's DeFi dominance, Layer-2 growth, proof-of-stake yield mechanics, and institutional ETF adoption, this target is within analyst consensus for the next cycle peak.

Profit Distribution & Return Calculation

How your returns are calculated at each liquidation event

Profit Split

\$500 Pool (ETH)

ETH Held:

6.614 ETH

@ \$15,000 Value:

\$99,210

Phase 1 Profit (85%):

~\$37,523

@ \$20,000 Value:

\$132,280

Phase 2 Profit (85%):

~\$112,013

\$1,000 Pool (ETH)

ETH Held:

26.455 ETH

@ \$15,000 Value:

\$396,825

Phase 1 Profit (85%):

~\$150,936

@ \$20,000 Value:

\$529,100

Phase 2 Profit (85%):

~\$448,885

PROFIT FORMULA

User Net Profit = (ETH Amount × Liquidation Price × Liquidation %) – Pool Fee

Platform Fee = 15% of gross profit | User Receives = 85% of gross profit

5-Level Referral Reward System

Earn commissions on Pool Fees paid by your network — down 5 levels deep

Level 1

Direct referrals you bring in

L5: \$10

Smart Contract Architecture

How the protocol operates on Binance Smart Chain (BSC)

User Layer

MetaMask / Trust Wallet

Protocol Layer

BSC Smart Contracts

Oracle Layer

Chainlink Price Feeds

Contract Modules

PoolManager.sol

Handles pool creation, fee collection, tier assignment

LoanVault.sol

Locks leveraged crypto, manages loan-to-value ratios

LiquidationBot.sol

Monitors Chainlink feeds, triggers sell at target prices

ReferralEngine.sol

Tracks 5-level referral tree, distributes commissions

FeeDistributor.sol

85/15 split, sends USDT/WBNB to users & platform

Developer Build Guide — Smart Contract Deployment

Step-by-step technical requirements to build and deploy the Crypto Loan Boost protocol

01 Tech Stack Setup

- Solidity ^0.8.20 (Smart Contracts)
- Hardhat or Foundry (Development Framework)
- OpenZeppelin Contracts (Security)
- Chainlink Data Feeds SDK (BSC)
- ethers.js v6 + Web3Modal (Frontend)

02 BSC Deployment Requirements

- BEP-20 Token Standard for pool receipts
- BNB for gas fees (BSC Mainnet)
- PancakeSwap Router for BTC/ETH swaps
- BTCTB & ETH BEP-20 tokens as loan assets
- Testnet first: BSC Testnet Chain ID 97

03 MetaMask Integration

- EIP-1193 provider injection (window.ethereum)
- Chain ID: 56 (BSC Mainnet)
- RPC: <https://bsc-dataseed.binance.org>
- Add BSC network prompt on first connect
- WalletConnect v2 for mobile support

04 Trust Wallet Integration

- WalletConnect v2 protocol (QR or deeplink)
- Trust Wallet Core SDK (optional for dApp)
- EVM-compatible — same contract ABI
- DeepLink: `trust://open_url?url=YOUR_DAPP`
- Test on Trust Wallet DApp Browser

Security, Compliance & Validity Requirements

What makes the Crypto Loan Boost smart contract system trusted and platform-compatible

Smart Contract Audit

Full audit by a recognized firm (CertiK, PeckShield, or Hacken) before mainnet launch. Audit report published publicly. Critical vulnerabilities must be zero.

Multi-Signature Admin

All admin keys require 3-of-5 multi-sig via Gnosis Safe. No single party can control funds. Emergency pause requires 2-of-5 signatures.

Chainlink Oracle Integration

Use AggregatorV3Interface for BTC/USD and ETH/USD on BSC. Validate freshness: `require(updatedAt > block.timestamp - 3600)` to prevent stale price attacks.

BSC Listing & Verification

Verify contract source code on BscScan. Add project logo, social links, and description. This is required for MetaMask token auto-detection and trust signals.

OpenZeppelin Standards

Use ReentrancyGuard, Ownable2Step, Pausable, and SafeERC20 from OpenZeppelin v5. These satisfy BSC validator expectations and wallet security scanners.

Legal Disclaimer & KYC

Display clear risk warnings in the UI. Consider jurisdiction restrictions. Optional KYC layer for pools above \$500 to improve platform legitimacy.

Marketing Strategy & Community Growth

Building trust, driving adoption, and scaling the Crypto Loan Boost network

Social Media Presence

- Active Twitter/X, Telegram, Discord
- Daily market updates (BTC/ETH live prices)
- Community AMAs bi-weekly
- Influencer partnerships (crypto KOLs)

Community Trust Building

- Publish full smart contract audit report
- Live BscScan verified contract page
- Real-time dashboard showing pool stats
- Regular transparency reports

Referral Growth Engine

- 5-level tree dashboard for participants
- Automated commission tracking on-chain
- Leaderboard with top earners
- Monthly referral champion rewards

Wallet Integration Marketing

- MetaMask: Add network & token tutorial
- Trust Wallet: DApp browser guide
- YouTube walkthrough videos
- One-click connect landing page

Content Marketing

- BTC & ETH analysis articles weekly
- Target price milestone explainer content
- Pool ROI calculator tool on website
- Email newsletter with market alerts

Launch Campaign

- Early-bird bonus: 5% extra pool allocation
- First 100 members get Level 1 bumped to 25%
- Airdrop for beta testers on BSC testnet
- Press release on CoinDesk, CoinTelegraph

Recommended Wallets & Platform Compatibility

Approved wallets for interacting with the Crypto Loan Boost protocol on BSC

MetaMask

Browser Extension + Mobile

Most widely used EVM wallet. Works with all BSC dApps. Easy BSC network addition.

SETUP STEPS:

1. Install MetaMask extension (metamask.io)
2. Add BSC Mainnet (ChainID: 56)
3. Import BTCB & ETH BEP-20 token addresses
4. Connect to Crypto Loan Boost dApp
5. Approve contract transaction for pool entry

★ **BEST FOR:** Desktop users, DeFi power users

Trust Wallet

Mobile Wallet (iOS & Android)

Official Binance mobile wallet. Has built-in BSC DApp Browser with full Web3 support.

SETUP STEPS:

1. Download Trust Wallet app (iOS/Android)
2. Open DApp Browser inside Trust Wallet
3. Navigate to Crypto Loan Boost URL
4. BSC auto-detected — no manual setup needed
5. Approve pool transaction from DApp browser

★ **BEST FOR:** Mobile users, beginners

Binance Web3 Wallet

Binance App Integrated Wallet

Built into the Binance exchange app. Direct BNB/BTCB/ETH transfers with no bridging.

SETUP STEPS:

1. Open Binance App → Web3 Wallet tab
2. Transfer BNB/BTCB/ETH to Web3 wallet
3. Navigate to Crypto Loan Boost via DApp browser
4. Supports BSC natively
5. Ideal for users already holding assets on Binance

★ **BEST FOR:** Binance exchange users

Development & Launch Roadmap

From concept to mainnet — a clear path to a live, trusted protocol

IN PROGRESS

UPCOMING

UPCOMING

LAUNCH

FUTURE

Foundation & Architecture

- Smart contract development (Solidity)
- Hardhat test suite (>95% coverage)
- Deploy on BSC Testnet (ChainID: 97)
- Chainlink oracle integration test

Phase 1

Month 1-2

Security & Audit

- Submit for CertiK / Hacken audit
- Fix all critical & high vulnerabilities
- Multi-sig Gnosis Safe setup
- Internal penetration testing

Phase 2

Month 2-3

Frontend dApp Build

- React.js dApp with Web3Modal
- MetaMask + Trust Wallet connect flow
- Pool dashboard & referral tree UI
- Mobile-responsive design

Phase 3

Month 3

BSC Mainnet Launch

- Deploy verified contracts on BscScan
- Pool liquidity seeding (platform)
- Community beta launch (first 100 users)
- Marketing campaign & KOL activations

Phase 4

Month 4

Scale & Feature Expansion

- Auto-compound staking feature
- Multi-chain expansion (ETH L2, Polygon)
- DAO governance token launch
- Mobile app (iOS & Android)

Phase 5

Month 5
